To: GTE Scientists
From: GTE Project Manager
Subject: GTE Bibliography Update and GTE Data Archive

Enclosed for your retention and use is an update of the GTE bibliography. The bibliography consists of citations for publications, presentations, and media coverage; and, has been significantly updated since the re-initial issue in March 1997. The citations are arranged by mission to facilitate identifying the time period, science subject and repository of the data referred to in the citation. We have limited the citations to those actually using GTE data or dealing in some other way with a GTE mission. The list is extensive and impressive. You should be proud of your contributions to the bibliography.

I know of no better way to show the scientific impact of the GTE program than a bibliography such as this. This bibliography update may have inadvertently omitted some important publication or presentation you have made in the past. Please provide us the appropriate information to allow its inclusion in the next update. Any additions or corrections should be sent to Mary M. Kleb (Mail Stop 401B, NASA Langley Research Center, Hampton, VA 23681-2199, or m.m.kleb@larc.nasa.gov). Whenever you publish or present a paper in the future, please send Mary Kleb a copy so that its citation will be included in the next bibliography update. Bibliography accuracy will be best served by sending us your citation information after it has been presented or published.

In closing, I want to remind you of the availability of all the GTE science measurements from all the missions. Currently, the data are available by ftp from the GTE archive. The server name is "Typhoon (typhoon.larc.nasa.gov)", the user is "anonymous", and the password is your "e-mail name". Sequential selections will present each mission, each PI in a mission, and each flight in the mission. In addition, we maintain a GTE WEB page to provide alternative data access as well as background information for GTE and each mission. The GTE data are also available via the EOS DAACs.

Please do not hesitate to contact me if you have questions or suggestions about the GTE program.

Victor E. Delnore

Document Revision History 158

GTE BIBLIOGRAPHY

Introductory Remarks

In 1984, the National Academy of Sciences recommended initiation of a Global Tropospheric Chemistry Program (GTCP) in recognition of the central role of tropospheric chemistry in global change. Envisioned as the U.S. national component of an ultimately international research effort, GTCP calls for the systematic study, supported by numerical modeling, of (1) biological sources of atmospheric chemicals; (2) global distributions and long-range transport of chemical species; and (3) reactions in the troposphere that lead to the conversion, redistribution, and removal of atmospheric chemicals.

NASA's contribution to GTCP is the Global Tropospheric Experiment (GTE), which utilizes large, extensively instrumented aircraft-ideal platforms for many atmospheric chemistry experiments as primary research tools. While GTE began primarily as an aircraft-based program supplemented by ground-based measurements, satellite data and model analyses now play an important role. Space Shuttle observations of tropospheric carbon monoxide distributions have helped to plan and direct the course of expeditions over tropical rain forests. Landsat land-surface images have facilitated the extrapolation of regional arctic-tundra measurements into global-scale conclusions. Weather data returned by environmental satellites and model analyses have guided flight planning for research aircraft. Modeling studies also play a critical role in interpreting the mission measurements.

Our knowledge of tropospheric chemistry is limited primarily by measurement capabilities. A first task of GTE was therefore to foster development of the new technologies and experimental techniques required for major research advances. These were evaluated through a series of rigorous intercomparisons called the Chemical Instrumentation Test and Evaluation (CITE) project. The CITE projects were designed to validate the instruments developed for GTE measurements through rigorous intercomparisons under actual field conditions. The three CITE projects completed to date have established the credibility (or, in some cases, the limitations) of powerful new techniques for atmospheric-chemistry measurements; calibrated these new techniques through comparisons with older, proven approaches and provided important new data on trace-gas concentrations in the clean-air regions that served as test sites.

The initial GTE field expeditions-the Atmospheric Boundary Layer Experiment (ABLE) projects-were designed to probe the interactions between the biosphere and the atmosphere. Nowhere is the atmosphere-biosphere interaction more pronounced than within the atmospheric boundary layer-the lowest few hundred meters of the atmosphere. Upward through this layer rise trace gases emitted by the biosphere or produced by industrial activity and combustion. And downward through this layer settle gases and aerosols formed by atmospheric chemistry processes, destined for final deposition on land and sea. Expeditions have now been completed in three ecosystems that are known to exert a major influence over global tropospheric

chemistry and that are being profoundly affected by natural processes, human activities, or both. These are the tropical Atlantic Ocean (ABLE-1), the Brazilian rain forest (ABLE-2), and the northern wetlands (ABLE-3).

Because of the great importance of trace-gas fluxes and their coupling to the global atmosphere, the first extensive GTE field studies were focused on these processes. The southern tropical Atlantic Ocean was the site of one of these large-scale experiments-Transport and Chemistry near the Equator in the Atlantic (TRACE-A). It built upon ABLE-2 results in the Amazon and the research of French, German, and African scientists in Africa to investigate the distribution of atmospheric trace gases over the tropical South Atlantic.

By the early 1990s, progress in instrumentation and the accumulation of additional expedition experience permitted studies of atmospheric chemistry over the Pacific Basin. Over this vast area is found some of the cleanest air on Earth. But around its rim are the most rapidly growing economies in the world. The retention of air quality in this area therefore poses perhaps the ultimate challenge to both science and governments. The projects designed to meet this challenge were collectively called the Pacific Exploratory Missions, or PEM. At present, four missions have been completed: (1) PEM-West A and B, which carried out measurements of the chemical composition of the air leaving the Asian continent, studied its transport to the central Pacific, and evaluated its impact there; (2) PEM-Tropics A, which studied the latitude and altitude dependence of trace-gas and aerosol concentrations over the central Pacific from Peru to New Zealand; and (3) PEM-Tropics B, which focused on the tropical Pacific rain forests and air-sea interactions. These projects have involved most of the Pacific Rim nations. The results have provided profound new insights into chemical changes within clean-air regions around the world.

In early spring 2001, GTE revisited the western Pacific for the Transport and Chemical Evolution over the Pacific (TRACE-P) mission. The two major objectives, (1) chemistry of air emerging from Asia and (2) the chemical evolution of that air as it moves away from Asia, and recent improvements in instrumentation allow deeper understanding of these phenomena than was possible during the PEM West missions.

GTE projects scheduled over the next several years will investigate the global distributions of atmospheric chemical species and the photochemical and transport processes that control large-scale atmospheric chemistry. Table 1 summarizes the GTE missions to date.

The purpose of this bibliography is to provide a single reference for the many publications and presentations (Table 2 indicates the major meetings at which GTE papers were presented) made possible by the GTE Project to date. It is hoped that by expanding visibility for GTE and related missions, increased scientific collaboration will occur. The citations are organized by mission. Inevitably, some citations have been unintentionally overlooked, and the reader is requested to bring these to the attention of the Project Office for inclusion in future bibliography updates.

Known publications and presentations for the Northern Wetlands Study (NOWES) and Southern African Fire-Atmosphere Research Initiative (SAFARI-92) have been included because of the close coordination (objectives, time and space) between these and GTE missions. Related publication and presentation citations are generally from work not sponsored by GTE, but utilize the same instruments as in GTE for another mission or make the same measurements at the same location as GTE or are studies of the same atmospheric phenomena which are a GTE focus. These sections also include citations for GTE work not specific to any one mission.

Table 1. GTE Field Expeditions

Expedition	Date	Location
CITE-1	11/83	Hawaii
CITE-1	4/84	Pacific-CA coast
ABLE-1	6/84	Barbados

Summary of ABLE-2B Special Publications and Presentations

ABLE-2B SPECIAL PUBLICATIONS:

J. Geophys. Res., 95, 20 September 1990

ABLE-2B SPECIAL PRESENTATIONS:

1988 AGU Spring Meeting, Baltimore, MD, 16-20 May 1988

ABLE-2B Media Coverage

1. "The Saharan-Amazonian Connection", *The World and I*, February 1991.

2. "Amazon depends on Sahara's winds", *Richmond Times-Dispatch*, February 1991.

3. "UVa scientists find Sahara dust saving Amazon forest", *The Daily Progress*, February 1991.

4. "Amazon basin may be eating Sahara's dust: Theory sees wind ferrying nutrients", *The Washington Post*, February 1991.

5. "Desert dust keeps rain forest alive, researchers find", *Inside UVa*, March 1991.

6. "African dust 'feeds' Amazon rain forest", *International Wildlife*, May/June 1991.

7. "Dust busters: Amazon 'vacuum cleaners' draw nutrients from the Sahara", *UVa Alumni News*, May/June 1991.

8. "Desert dust nurtures faraway rain forest", *Geotimes*, June 1991.

9. "Is Africa's windblown loss the Amazon's gain?", *National Geographic*, September 1991.

10. “Analyzing jungle breath Amazon air may hold clues to Earth’s chemistry”, *San Jose (CA) Mercury News*, 16 June 1987.

11. “Team studies Amazon’s weather role NASA’s rain forest camp monitors the atmosphere”, *Miami (FL) Herald*, 27 May 1987.

ABLE-3B Presentations

1. Anderson, B. E., G. L. Gregory, A. S. Bachmeier, E. V. Browell, M. C. Shipham, D. R. Blake, J. D. Bradshaw, S. T. Sandholm, G. W. Sachse, J. E. Collins, Jr., and R. W. Talbot, Low ozone events in the mid-troposphere over Canada during summer 1990. Paper No. A32C-12, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

2. Bachmeier, A. S., M. C. Shipham, E. V. Browell, and J. M. Klassa, Dynamics of stratosphere/troposphere exchange mechanisms observed during ABLE-3B. Paper No. A41A-2, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

3. Bakwin, P. S., J. W. Munger, B. C. Daube, and S. C. Wofsey, Reactive nitrogen oxides at a sub-Arctic site (Schefferville, PQ). Paper No. A41A-11, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

4. Barrick, J. D., J. A. Ritter, C. E. Watson, G. L. Gregory, B. E. Anderson, G. W. Sachse, and J. E. Collins, Jr., Correlation of surface characteristics to in situ airborne boundary layer flux measurements of CO, CH_4, and O_3. Poster No. A42A-2, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

5. Blake, D. R., T. Y. Chen, T. W. Smith, Jr., W. J. Whipple, and F. S. Rowland, Halocarbons and hydrocarbons measured in eastern Canada during ABLE-3B in the summer of 1990. Paper No. A32C-6, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

6. Bradshaw, J. D., S. T. Sandholm, R. W. Talbot, H. B. Singh, D. R. Blake, F. S. Rowland, G. W. Sachse, J. E. Collins, Jr., G. L. Gregory, B. E. Anderson, J. D. W. Barrick, M. C. Shipham, and A. S. Bachmeier, Summertime tropospheric spatial distribution of reactive odd-nitrogen compounds over Canada. Paper No. A32C-7, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

7. Browell, E. V., Recent developments in airborne lidar measurements of ozone, water vapor, and aerosols, OSA Laser Applications to Chemical Analysis, Washington, DC.

8. Browell, E. V., M. A. Fenn, C. F. Butler, G. D. Nowicki, S. D. Mayor, S. A. Kooi, A. F. Carter, W. B. Grant, and NASA ABLE-3B Science Team, Air mass characteristics observed over Canada during ABLE-3B field experiment. Invited Paper No. A32C-2, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

9. Browell, E. V., G. L. Gregory, B. E. Anderson, M. C. Shipham, A. S. Bachmeier, W. B. Grant, J. D. W. Barrick, G. W. Sachse, J. E. Collins, Jr., J. D. Bradshaw, S. T. Sandholm, D. R. Blake, F. S. Rowland, and H. B. Singh, Influence of stratospheric intrusions on chemical composition of troposphere over Canada during the summer of 1990. Paper No. A32C-11, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

10. Collins, J. E. Jr., G. W. Sachse, G. F. Hill, L. G. Burney, and L. O. Wade, DACOM: Dual gas/dual purpose in-situ instrument for GTE/ABLE-3B expedition. Poster No. A42A-3, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

11. Fan, S.-M., D. J. Jacob, D. L. Mauzerall, J. D. Bradshaw, S. T. Sandholm, D. R. Blake, H. B. Singh, R. W. Talbot, G. L. Gregory, and G. W. Sachse, Photochemistry of reactive nitrogen in the subarctic troposphere in summer 1990: Observations and modeling. Invited Paper No. A52C-8, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

12. Fitzjarrald, D. R. and K. E. Moore, Surface turbulent exchange and boundary layer climate in a forested region of northern Quebec. Paper No. A41A-5, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

13. Gregory, G. L., B. E. Anderson, M. C. Shipham, E. V. Browell, and R. W. Talbot, Size characteristics of tropospheric aerosols as observed during periods of haze and biomass burning over Canada during the Summer of 1990. Paper No. A32C-4, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

14. Harriss, R. C. and S. C. Wofsey, The Arctic Boundary Layer Expedition (ABLE 3B). Invited Paper No. A32C-1, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

15. Hübler, G., M. P. Buhr, F. C. Fehsenfeld, D. D. Parrish, M. Trainer, B. A. Ridley, J. A. Logan, and S. J. Oltmans, Ozone profiles in the lower troposphere. Paper No. A12E-8, 1996 AGU Fall Meeting, San Francisco, CA, December 1996.

16. Lefer, B. L., K. I. Klemm, O. Klemm, R. W. Talbot, and R. C. Harriss, Observations of phosphoric and oxalic acids in biomass burning plumes over central Canada during ABLE-3B. Poster No. A42A-4, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

17. Martens, C. S., C. A. Kelly, W. Ussler, III, R. J. McCaffrey, J. P. Chanton, and J. Happell, Stable carbon isotope characterization of methane emissions from Canadian sub-Arctic fens, Schefferville, Quebec, Summer 1990. Paper No. A41A-12, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

18. Mauzerall, D. L., D. J. Jacob, S.-M. Fan, J. D. Bradshaw, S. T. Sandholm, D. R. Blake, G. L. Gregory, and G. W. Sachse, An ozone budget for the remote troposphere of eastern Canada. Paper No. A52C-7, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

19. Moore, K. E. and D. R. Fitzjarrald, Turbulent fluxes at a sub-Arctic fen during ABLE-3B. Paper No. A41A-6, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

20. Munger, J. W., P. S. Bakwin, B. C. Daube, and S. C. Wofsey, Deposition of nitrogen oxides and ozone to a boreal forest. Paper No. A41A10, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

21. Olson, J. O., J. D. Bradshaw, D. D. Davis, S. T. Sandholm, G. L. Gregory, B. E. Anderson, J. D. W. Barick, G. W. Sachse, and J. E. Collins, Jr., Photostationary state implications of ABLE-3B NO_2/NO measurements. Poster No. A42A-5, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

22. Ritter, J., C. Watson, J. D. W. Barrick, G. W. Sachse, J. E. Collins, Jr., G. L. Gregory, B. E. Anderson, and M. Woerner, Airborne boundary layer measurements of heat, moisture, CH_4, CO, and O_3 fluxes over Canadian boreal forest and northern wetland regions. Paper No. A51B-6, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

23. Sachse, G. W., J. E. Collins, Jr., R. C. Harriss, G. F. Hill, L. O. Wade, L. G. Burney, L. P. Steele, and P. C. Novelli, Methane and carbon monoxide distributions over the ABLE-3B study region. Paper No. A32C-5, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

24. Sandholm, S. T., J. D. Bradshaw, R. W. Talbot, H. B. Singh, G. L. Gregory, B. E. Anderson, J. D. W. Barrick, M. C. Shipham, G. W. Sachse, J. E. Collins, Jr., and A. S. Bachmeier, The odd-nitrogen budget from observations made during ABLE-3B. Paper No. A32C-9, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

25. Shipham, M. C., A. S. Bachmeier, E. V. Browell, and D. R. Cahoon, Meteorological factors influencing the long-range transport of smoke during the ABLE-3B flight series. Paper No. A41A-1, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

26. Singh, H. B., D. O'Hara, D. Herlth, J. D. Bradshaw, S. T. Sandholm, R. W. Talbot, D. R. Blake, and G. L. Gregory, Reactive nitrogen distribution and photochemistry during ABLE-3B. Paper No. A32C-10, 1991 AGU Spring Meeting, Baltimore, MD, May 1991.

PEM-West B Presentations

1. Akimoto, H., Y. Kajii, and J. Hirokawa, Measurements of ozone and carbon monoxide at a remote marine site, Oki Island, in Japan. WMO-IGAC Conference on the Measurement and Assessment of Atmospheric Composition Change, Beijing, China, 9-14 October 1995.

2. Andronache, C., W. L. Chimeides, D. D. Davis, C. S. Kiang, B. E. Anderson, R. F. Pueschel, A. R. Bandy, R. W. Talbot, and P. Kasibhatla, Gas to particle conversion of tropospheric sulfur as estimated from observations in the western north Pacific during PEM-West B. Poster A12B-13, 1996 AGU Fall Meeting, San Francisco, CA, December 1996.

3. Andronache, C., L. J. Donner, C. J. Seman, V. Ramaswamy, and R. S. Hemler, Atmospheric sulfur and deep convective clouds in tropical Pacific: A model study. Poster No. A21C-14, 1998 AGU Spring Meeting, Boston, MA, May 1998.

4. Bey, I., R. M. Yantosca, and D. J. Jacob, Export of pollutants from eastern Asia: A simulation of the PEM-West B aircraft mission using a 3-D model driven by assimilated meteorological fields. Paper No. A21E-03, 1999 AGU Spring Meeting, Boston, MA, May 1999.

5. Chen, G., D. D. Davis, A. R. Bandy, and D. C. Thornton, An assessment of DMS oxidation as a source of SO_2 based on PEM-West A and PEM-West B observations. Paper No. A11E-4, 1995 AGU Fall Meeting, San Francisco, CA, December 1995.

6. Crawford, J. H., D. D. Davis, G. Chen, and the PEM West-B Science Team, Exploring large scale shifts in NO_2 in the remote tropical Pacific atmosphere. Paper No. A21G-10, 1995 AGU Fall Meeting, San Francisco, CA, December 1995.

7. Davis, D. D., S.-C. Liu, R. E. Newell, and J. M. Hoell, Jr., Pacific Exploratory Mission West/Phase B (PEM-West B): An overview of preliminary findings. Paper 2.03, 2nd Scientific Conference of the International Global Atmospheric Chemistry Project (IGAC), Fuji-Yoshida, Japan, 5-9 September 1994.

8. Folkins, I., R. Chatfield, H. Singh, and Y. Chen, Sensitivity of upper tropospheric ozone production to convective injection of peroxides and acetone. Poster No. A11A-29, 1997 AGU Fall Meeting, San Francisco, CA, December 1997.

9. Folkins, I. A., M. Lowenstein, J. Podolske, S. J. Oltmans, and M. Proffitt, A 14 km mixing barrier in the tropics – Evidence from ozonesondes and aircraft measurements. Paper No. A51E-03, 1999 AGU Spring Meeting, Boston, MA, May 1999.

10. Liu, H., D. J. Jacob, I. Bey, R. M. Yantosca, and D. M. Koch, Three-dimensional simulation of ^{210}Pb and ^{7}Be in the Harvard-DAO tropospheric chemistry model. Paper No. A21E-11, 1999 AGU Spring Meeting, Boston, MA, May 1999.

11. Liu, S. C., D. D. Davis, and J. D. Bradshaw, Tropospheric ozone budget over the western Pacific. Paper No. A41A-01, 1998 AGU Western Pacific Geophysics Meeting, Taipei, Taiwan, July 1998.

12. Liu, S. C., S. A. McKeen, E.-Y. Hsie, B. E. Anderson, A. R. Bandy, D. R. Blake, J. D. Bradshaw, E. V. Browell, D. D. Davis, G. L. Gregory, B. G. Heikes, J. M. Hoell, Y. Kondo, J. T. Merrill, R. E. Newell, R. Pucschel, F. S. Rowland, G. W. Sachse, H. B. Singh, R. W. Talbot, and D. C. Thornton, Tropospheric chemistry over western Pacific: PEM West overview. Paper No A32B-5, 1994 AGU Western Pacific Geophysics Meeting, Hong Kong, August 1994.

13. Liu, S. C., S. A. McKeen, E.-Y. Hsie, X. Lin, D. R. Blake, F. S. Rowland, A. R. Bandy, D. C. Thornton, E. V. Browell, and D. D. Davis, Vertical transport of tracers in the tropical Pacific. Paper No. A21G-12, 1995 AGU Fall Meeting, San Francisco, CA, December 1995.

14. Mauzerall, D. L., G. Brasseur, and D. Haugulstaine, Production and export of tropospheric ozone from Asia-Global modeling and analysis of PEM-West B data. Poster No. A11A-10, 1997 AGU Fall Meeting, San Francisco, CA, December 1997.

15. Miyazaki, Y., K. Kita, Y. Kondo, S. Kawakami, T. Ogawa, T. Machida, D. R. Blake, B. J. Liley, and N. Nishi, Effect of surface emissions on the distributions of ozone and its precursors observed in the upper troposphere over East Asia in April 1998. Paper No. A22D-04, 2000 AGU Western Pacific Geophysics Meeting, Tokyo, Japan, June 2000.

16. Miyazaki, Y., K. Kita, Y. Kondo, M. Ko, W. Hu, S. Kawakami, M. Koike, D. Blake, and T. Ogawa, Springtime photochemical ozone production observed in the upper troposphere over East Asia. Poster No. A32B-01, 2001 AGU Spring Meeting, Boston, MA, May 2001.

17. Redemann, J., R. P. Turco, K. N. Liou, R. F. Pueschel, W. B. Grant, and E. V. Browell, A multi-instrument approach for the characterization of the vertical structure of aerosol optical properties. Poster No. A21C-10, 1998 AGU Spring Meeting, Boston, MA, May 1998.

18. Redemann, J., R. P. Turco, R. F. Pueschel, W. B. Grant, and E. V. Browell, Aerosol measurements in the Pacific basin troposphere during the Pacific Exploratory Mission West B (PEM-West B): Indications of in situ measurements for lidar data inversion. Paper No. A11C-07, 1996 AGU Fall Meeting, San Francisco, CA, December 1996.

19. Song, C. H. and G. R. Carmichael, Aerosol generation, evolution, transport, and deposition over East Asia. Poster No. A22B-10, 1999 AGU Fall Meeting, San Francisco, CA, December 1999.

20. Wang, T., K. S. Lam, L. Y. Chan, M. Anson, Z. L. Cheng, Trace gas measurements during periods of continental outflow: Results from a Hong Kong site during the PEM-West B, WMO-IGAC Conference on the Measurement and Assessment of Atmospheric Composition Change, Beijing, China, 9-14 October 1995.

21. Zhao, J. Z. and M. O. Rodgers, China rural oxidant study, WMO-IGAC Conference on the Measurement and Assessment of Atmospheric Composition Change, Beijing, China, 9-14 October 1995.

Summary of TRACE-A Special Publications and Presentations

TRACE-A SPECIAL PUBLICATIONS:

J. Geophys. Res., 101, 30 October 1996

TRACE-A SPECIAL PRESENTATIONS:

2nd Scientific Conference of the International Global Atmospheric Chemistry (IGAC) Project, Fuji-Yoshida, Japan, 5-9 September 1994

SAFARI-92 SPECIAL PUBLICATIONS:

J. Geophys. Res., 101, 30 October 1996

SAFARI-92 SPECIAL PRESENTATIONS:

1993 AGU Fall Meeting, San Francisco, CA, 6-10 December 1993

TRACE-A Media Coverage

1. "Inpe e Nasa estudam efeitos de queimadas", *Folha De São Paulo*, 9 August 1992.

2. "Nasa estuda gás nos ares do Brasil", *O Estado De São Paulo*, 15 August 1992.

3. "Inpe e Nasa medem efeito das queimadas no céu", *Vale Paraibano* (São José Dos Campos), 28 August 1992.

4. "INPE inicia pesquisa sobre concentrações de ozônio na região central do País", *Gazeta Mercantil* (São Paulo), 2 September 1992.

5. "Nuvem tóxica gigante sobrevao Atlântico", *Folha De São Paulo*, 10 September 1992.

6. "Falha em avião da Nasa atrasa projeto do Inpe", *Folha De São Paulo*, 11 September 1992.

7. "Nuvem tóxica de ozônio sobre o mar tem tamanho do Brasil", *Jornal Do Brasil* (Rio De Janeiro), 11 September 1992.

8. "Maus ventos trazem Nasa ao País", *O Estado De São Paulo*, 3 October 1992.

9. "Nasa detecta no Tocantins o maior foco de queimadas", *O Globo* (Rio De Janerio), 3 October 1992.

10. "Nasa e Inpe vêem mancha de ozônio e queimadas", *ValeParaibano* (São José Dos Campos), 3 October 1992.

11. "Avião decola do Rio atrás de nuvem tóxica", *Folha De São Paulo*, 3 October 1992.

12. "Nasa investiga a mancha de ozônio sobre o Atlântico Sul", *Jornal Do Brasil* (Rio De Janeiro), 3 October 1992.

13. "Puzzle of mystery ozone cloud over Brazil", *New Scientist*, 10 October 1992.

14. "All USA college academic team: Third Team", *USA Today*, 31 January 1992.

18. Thompson, A. M., D. P. McNamara, K. E. Pickering, R. D. Hudson, and members of the TRACE-A and SAFARI Science Teams, Ozone over southern Africa and the Atlantic during the 1992 IGAC / STARE / SAFARI / TRACE-A missions. Paper No. 2.16, 2nd Scientific Conference of the International Global Atmospheric Chemistry (IGAC) Project, Fuji-Yoshida, Japan, 5-9 September 1994.

19. Thompson, A. M., K. E. Pickering, D. P. McNamara, and M. R. Schoeberl, and the TRACE-A Science Team, What is the origin of the austral spring tropospheric ozone maximum in the south Atlantic basin? Answers from GTE/TRACE-A. Paper No. A51A-8, 1995 AGU Spring Meeting, Baltimore, MD, May 1995.

20. Thompson, A. M., K. E. Pickering, D. P. McNamara, M. R. Schoeberl, and the TRACE-A Science Team, The south Atlantic tropospheric ozone maximum: Insights from a GTE mission to assess a tropospheric chemical problem, AEAP Meeting, Virginia Beach, VA, April 1995.

SAFARI-92 Presentations

1. Andreae, M. O., An overview over the SAFARI-92 experiment: The role of vegetation fires in the environment of southern Africa. Invited Paper No. A12H-1, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

2. Andreae, M. O., T. W. Andreae, P. leCanut, W. Elbert, G. Helas, F. Wienhold, T. Zenker, H. Annegarn, F. Beer, H. Cachier, W. Maenhaut, I. Salma, and R. Swap, Airborne studies of aerosol emissions from savanna fires in southern Africa. Paper No. 4.10, 2nd Scientific Conference of the IGAC Project, Fuji-Yoshida, Japan, 5-9 September 1994.

3. Andreae, M. O., T. W. Andreae, W. Elbert, G. W. Harris, F. G. Wienhold and T. Zenker, H. Annegarn, F. Beer, H. Cachier, W. Maenhaut, I. Selma, R. Swap, Airborne studies of aerosol emissions from savanna fires in southern Africa. Invited Paper No. A21H-3, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

4. Andreae, M. O., T. Andreae, W. Elbert, F. Wienhold, and T. Zenker, Airborne measurements of aerosol emission characteristics and regional distribution of aerosols from biomass burning in southern Africa during STARE/SAFARI-92. 1st IGAC Scientific Conference, Paper No. 42, Eilat Israel, 18-22 April 1993.

5. Andreae, M. O., G. Helas, S. Manoe, G. Schebeske, D. Scharffe, E. Atlas, A. de Kock, W. Pollock, R. Koppmann, and J. Rudolph, Methyl halide emissions from savanna fires in southern Africa. Invited Paper No. A12H-9, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

6. Andreae, M. O. and the SAFARI Science Team, An overview over the IGAC/SAFARI experiment: The role of vegetation fires in the environment of southern Africa. Paper No. 2.14, 2nd Scientific Conference of the IGAC, Fuji-Yoshida, Japan, 5-9 September 1994.

7. Annegarn, H. J., M. A. Kneen, S. Piketh, and W. Maenhaut, Aerosol source apportionment and long range sulphate transport in the Transvaal lowveld. Invited Paper No. A21H-7, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

8. Cachier, H., C. Liousse, J. L. Hery, A. Gaudichet, F. Echalar, and P. Masclet, Aerosol production by African savanna biomass burning. Invited Paper No. A21H-5, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

9. Clain, M. P., P. Masclet, and H. Cachier, Emission of organic compounds by biomass burning and charcoal fabrication: I. Emission of polycyclic aromatic hydrocarbons-Field studies. Invited Paper No. A21H-11, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

10. Cofer, W. R. III, J. S. Levine, D. R. Cahoon, Jr., E. L. Winstead, D. I. Sebacher, J. P. Pinto, and B. J. Stocks, Source composition of trace gases released during African

savanna fires. Paper No. A12H-5, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

11. Combrink, J., R. D. Diab, and F. Sokolic, Ozone profile comparisons in southern Africa. WMO-IGAC Conference on the Measurement and Assessment of Atmospheric Composition Change, Beijing, China, 9-14 October 1995.

12. deKock, A., W. Pollock, and E. Atlas, Organic compounds in biomass burning emissions during SAFARI. Poster No. A11C-5, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

13. Hao, W. M., G. Olbu, S. P. Baker, and D. E. Ward, Emissions of CO_2, CO and hydrocarbons from fires in selected savanna ecosystems of South Africa and Zambia. Invited Paper No. A12H-9, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

14. Harris, G., T. Zenker, F. Wienhold, U. Parchatka, and M. Welling, SAFARI-92: Airborne measurements of trace gases emitted by southern African veld fires. 1st IGAC Scientific Conference, Paper No. 40, Eilat, Israel, 18-22 April 1993.

15. Harris, G. W., T. Zenker, F. G. Wienhold, M. Welling, U. Parchatka, and M. O. Andreae, Airborne measurements of trace gas emission ratios from southern African veld fires. (STARE/SAFARI-92/DC3-Component). Invited Poster No. A11C-1, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

16. Harris, G. W., T. Zenker, F. G. Wienhold, M. Welling, U. Parchatka, and M. O. Andrea, G. W. Harris, R. Koppmann, and J. Rudolph, Distribution of trace gases in the southern African boundary-layer during September and October 1992 (STARE/SAFARI-92/DC-3 component). Invited Paper No. A12H-6, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

17. Harris, G. W., T. Zenker, F. S. Wienhold, M. Welling, and U. Parchatka, Airborne observations of strong bogenic NO_x emissions from the Namibian savanna at the end of the dry season. Invited Paper No. A12H-13, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

18. Helas, G, M. O. Andreae, G. Schebeske, D. Scharffe, S. Manoe, R. Koppmann, and J. Rudolph, Light hydrocarbons measured in plumes of savanna fires in South Africa. 2nd Scientific Conference of the IGAC Project, Poster No. p215, Fuji-Yoshida, Japan, 5-9 September 1994.

19. Helas, G., G. Schebeske, D. Scharffe, S. Mano, M. O. Andreae, R. Koppmann, J. Rudolph, A. De Kock, and E. Atlas, Light hydrocarbons measured over savanna fires in South Africa. Invited Paper No. A12H-11, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

20. Koppmann, R., A. Khedim, J. Rudolph, G. Helas, M. Welling, S. Manoe, Airborne measurements of nonmethane hydrocarbon emissions from savanna fires in southern Africa. Paper No. A12H-12, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

21. Kuhlbusch, T. A. J., Black carbon as a product of savanna fires in southern Africa: A sink of biospheric carbon. Invited Paper No. A21H-2, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

22. Levine, J. S., W. R. Cofer, III, D. R. Cahoon, Jr., D. I. Sebacher, E. L. Winstead, M. C. Scholes, D. Parsons, and R. J. Scholes, Biogenic emissions of nitric oxide and nitrous oxide from the savanna grasslands of southern Africa. Paper No. A12H-14, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

23. Liousse, C., H. Cachier, and F. Dulac, Remote sensing of savanna biomass burning aerosols. Invited Paper No. A21H-9, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

24. Maenhaut, W., I. Salma, J. Cafmeyer, H. J. Annegarn, and M. O. Andreae, Composition and sources of the regional atmospheric aerosol in the eastern Transvaal, South Africa and impact of biomass burning. Invited Paper No. A21H-6, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

25. Maenhaut, W., I. Salma, J. Cafmeyer, H. J. Annegarn, and M. O. Andreae, Regional aerosol composition in the eastern Transvaal, South Africa and impact of biomass burning. 2nd Scientific Conference of the IGAC Project, Poster No. p258, Fuji-Yoshida, Japan, 5-9 September 1994.

26. Maenhaut, W., I. Salma, M. Garstang, and F. Meixner, Six-fractionated atmospheric aerosol composition and aerosol sources at Etosha, Namibia and Victoria Falls, Zimbabwe. Poster No. A11C-2, 1993 AGU Fall Meeting, San Francisco, CA, December 1993.

GTE BIBLIOGRAPHY

Revision History

Revision	Date	Comments
Original	April 1994	Initial issue
A	December 20, 1996	Preliminary update for PI review
B	February 28, 1997	Incorporates PI updates, library searches, Introductory Comments, inclusion of all authors, and general revision for citation consistency.
C	December 5, 2001	Incorporates PI updates, library searches, inclusion of all authors, and general revision for citation consistency.
